

~~SECRET~~VAULTS 228 - 228A - 228B

Attachment 1 reflects the present layout for these vaults. Attachment 2 is the proposed layout. Comparative figures on the file materials and file capacities are as follows:

	<u>File Material</u>	<u>Present Capacity</u>	<u>Proposed Capacity</u>
228	72.2	74.0	96.0 (182.0)*
228A	57.2	173.0	185.0
228B	<u>144.0</u>	<u>221.0</u>	<u>288.0</u> (360.0)*
	273.4	468.0	569.0 (727.0)*

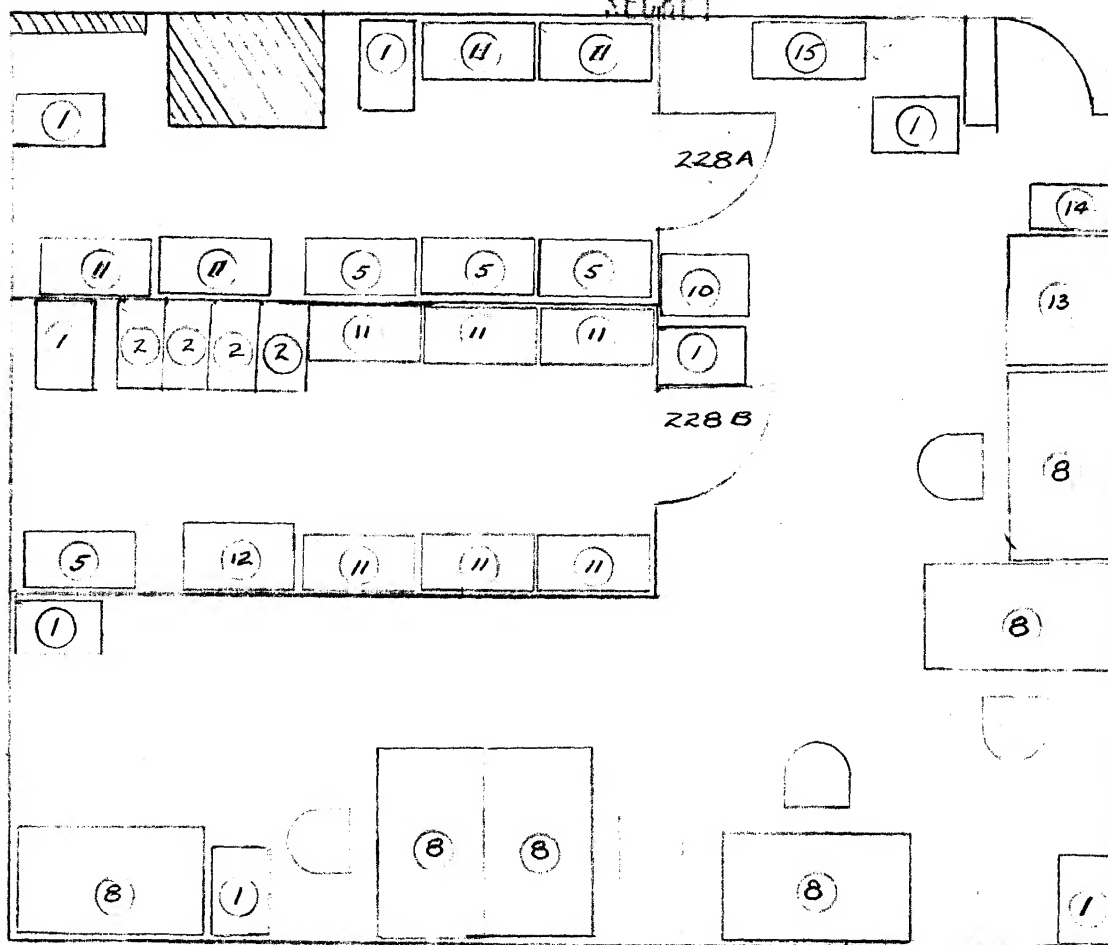

The present equipment provides for 41.5 percent expansion and if properly utilized, this should be adequate for the present. The outer room (228) appears to be very crowded and this condition can be relieved and at the same time increase the file capacity to 51.5 percent by adopting the proposed plan. Additional expansion in 228A is limited by the need to retain the three locked supply cabinets.

\*Further possible additional expansion is reflected by this dotted line, but it does not appear to be warranted at this time.
